# QUICK CONFIGURATION GUIDE
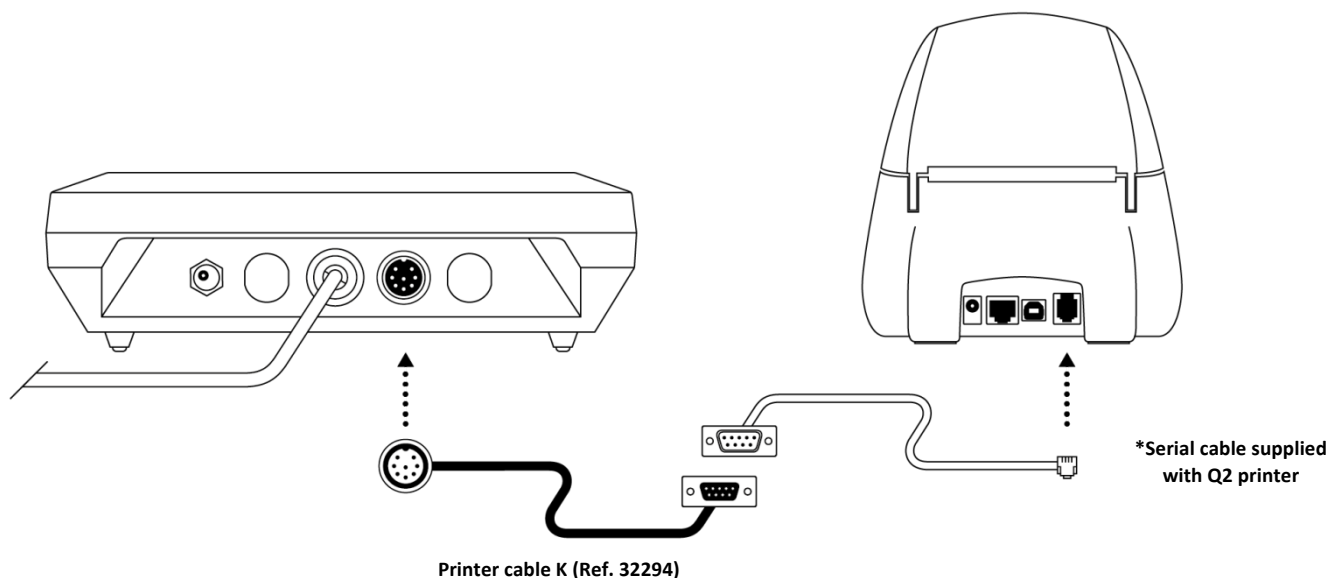

## Connection

Connect the "K printer cable" (Ref. 32294) to the weight indicator and to the printer.

*Serial cable supplied with Q2 printer

Printer cable K (Ref. 32294)

## Step 1: Configure the K3 weight indicator for use with the Q2 printer

The K3 indicator is factory-configured for using a PR4 model printer. To obtain full performance from your **Q2 printer**, you need to first change this configuration before its use, following the indications contained in this document. Once this procedure has been completed, the configuration is registered in the unit's non-volatile memory and it will not be necessary to repeat it.

1. Long press of the **[PLU/M]** key to access the configuration options menu.
2. The A-OF menu appears
3. Press the ← key to move to the rS232 menu option
4. Press the Enter key to validate, the display will show the option bAud
5. Press the ← key to move to the COM 1 menu item
6. Press the Enter key to validate, the display will show the option S-Mod 1
7. Press the ← key to move to the FOrM 1 menu item
8. Press the Enter key to validate, the display will show Pr4
9. Press the ← key to move to the menu item Q2
10. Press the ↵ key to validate, SAUE will appear and you will return to the FOrM 1
11. Press the **Esc** key **(U)** three times to exit the setup menus.
12. Setup is complete.
